PROTAVIC'S COMMUNITY

01 -2021

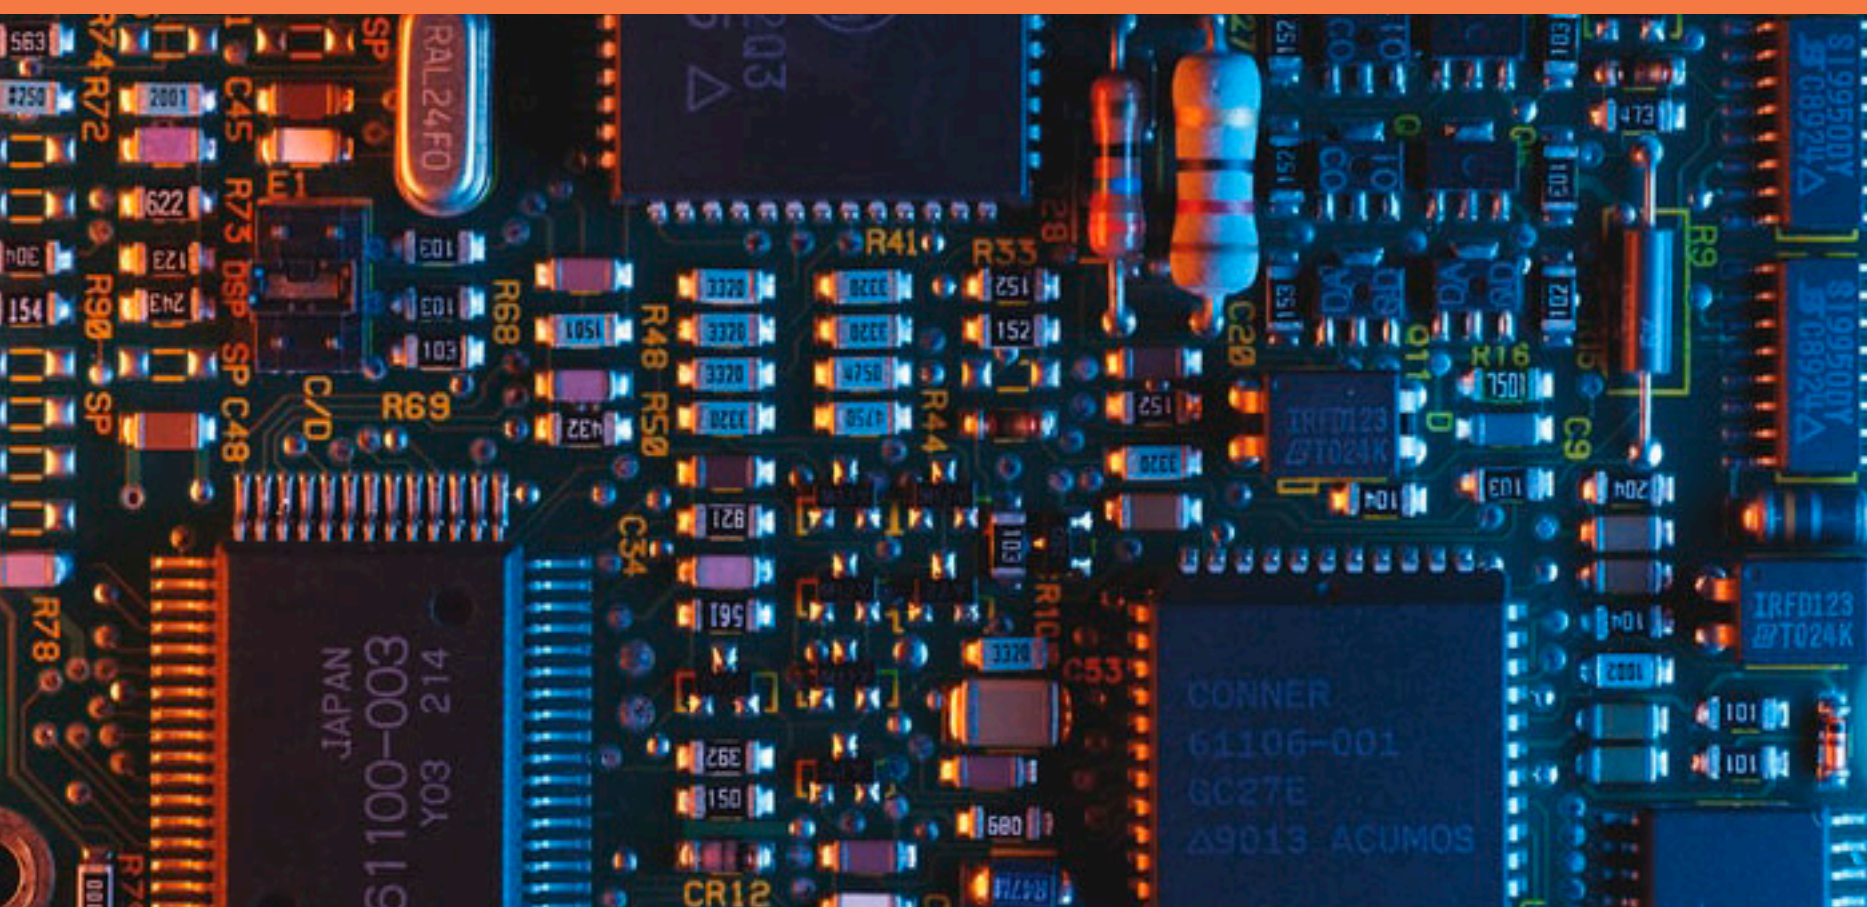

Dear Partner

PROTAVIC INTERNATIONAL continues to answer to the customer requirements with CMR free products and a [new website](#) to choose new products meeting customer needs.

Potting resins, conductive and insulating adhesives are presented on

www.protavic.com

NEW PRODUCT

PROTAVIC PNE 20700

This new CMR free product is the **most flowable** underfill, which can **fill easily any small cavities** by micro-dispensing (Viscosity CP51 at 25°C: 500mPa.s).

The physical properties have a good balance between **fast curing time** (less than one minute above 125°C) and others characteristics such as hardness (D75), glass transition temperature and CTE.

This unfilled resin has a **good adhesion** on silicon and its **high ionic purity** permits to be placed in direct contact with semiconductors.

It also provides a good resistance to moisture and solvents.

Together, we will work to find the product made for you.

We remain at your disposal to answer your questions.
Feel free to ask and discuss with us.
